

WORK SMART
WORK SAFE...

Calm Network training course

Operate the
Network correctly

You may have many years of experience but do you really know the effects you can have on your network?

Aquam Water Services Training Division can offer you this course online.

Designed for any operatives of the water networks such as Network Technicians, Leakage Inspectors and Repair & Maintenance Contractors but not just limited to them as this can be extended to all who operate hydrants for example private supply operators, Fire & rescue services, etc.

Objective:

Candidates will achieve an understanding of the causes of transient surge on the water network (The causes of surge, water hammer, shock waves and trapped air).

The course aims to provide training and assessment of acceptable levels of competence when operating valves on the water network whilst minimising the risk of damage and disruption to supplies.

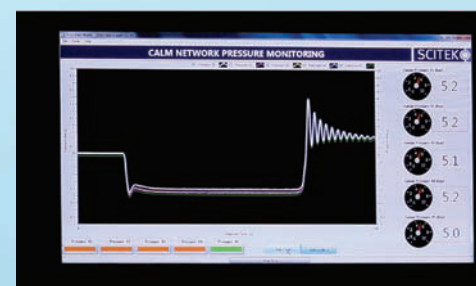

Education on the use of tools and technology associated with valve operation

Accreditation:

On successful completion of the Calm networks course you will be supplied with a Calm certificate. Details will be registered on the Calm networks certification database for 1 year, refresher course required annually.

Whatever your needs this courses can be arranged at short notice, on line, tailored to your specific requirements.

Train and Modify usage for the future
